

## Online Versus Tape

- **Centralised and automated backup scheduling**
- **Encrypted data sent securely and immediately offsite**
- **Data held on disk for rapid restoration, with an additional copy on tape**
- **A cost-effective solution with option to pay per usage model**
- **Long term data storage option**

1. Small and single files located and restored in seconds
2. On pay as you store, no software or agents re installed on servers or PCs
3. Data Stored securely off-site and restored quickly on-line
4. Fully automated back-up eliminates human error
5. I.T staff can securely initiate backup and restores from a remote location
6. Once set up, is totally automated and will run un-attended
7. Laptops can be automatically backed up when attached to LAN / WAN
8. Option of 24 \* 7 \* 365 support and monitoring service with escalation procedures
9. Permissions can be set to enable individual user restores (if required)
10. Encrypted data is held on high availability disk arrays with a back-up copy on tape
11. Only the compressed data changes (using common file elimination) are backed up
12. Concurrent multi back-up and restores permitted
13. Fully scaleable with future proof infrastructure
14. Pay per usage only pay for what you use and when you use it
15. Data is transferred off-site immediately
16. Low cost internet connectivity available
17. Built in disaster recovery (with annual test invocations available)
18. Forms part of an overall *Business Continuity Plan*
19. Total back-up service is covered by a comprehensive SLA
20. Gateway to additional managed services.
