

# EVault InfoStage®

## Delivering the most advanced disk-based backup and recovery software solution

EVault InfoStage is online backup software utilizing advanced disk-to-disk technology for protecting an entire company's business-critical data. EVault InfoStage ensures cost-effective backup of data from corporate or remote offices over a local or wide-area network to a backup Vault. EVault's automated, secure, disk-to-disk backups eliminate labor-intensive manual and error-prone tasks that are associated with traditional tape backup solutions.

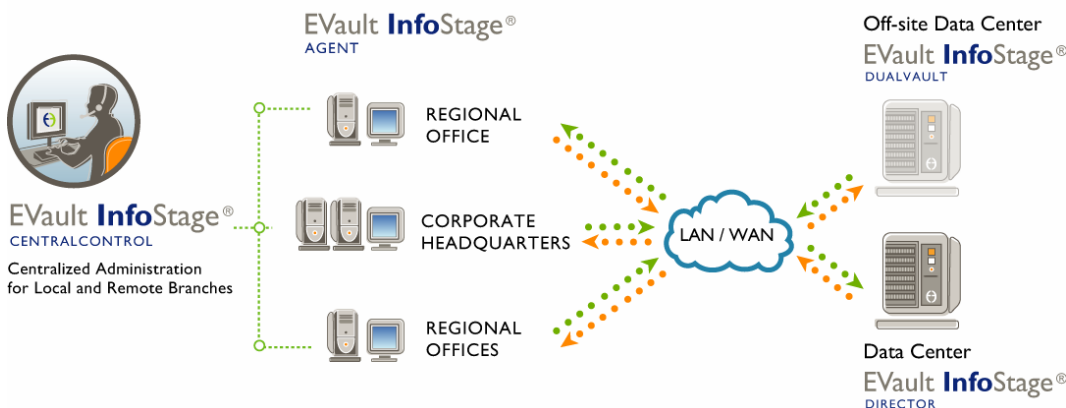

### Superior performance and reliability

EVault InfoStage delivers superior performance that optimizes backup and restore functions, lowers back-end storage costs and helps businesses in maintaining regulatory compliance. EVault DeltaPro® technology speeds up backup operations and drastically reduces storage costs as only new and changed data blocks are backed up. All backup data is compressed and encrypted before being transferred. The data remains that way on the storage vault, increasing security and reducing storage consumption. Open files are backed up seamlessly, enabling backups to occur without interruption to critical business applications.

### End to end data security

Data remains continuously encrypted while in storage and during over-the-wire transmissions. During restore the data is only decrypted when the encryption key holder enters the pass code.

## EVault InfoStage Architecture

EVault InfoStage centralizes the backup and recovery of all computers distributed throughout an organization – local and remote.

## Key Benefits

**Superior performance and reliability**

**End to end data security**

**Tiered Storage**

**Application integration**

**Centralized management**

**Industry-leading platform support**

## Centralized management for distributed environments

EVault InfoStage drastically simplifies the protection of business-critical data across a network or in remote offices. Configuring, monitoring, management and reporting of all backup and recovery operations, schedules, and logs is completely centralized and accessed via a single, unified management console. With EVault Reports – EVault’s web-based reporting portal, administrators can gauge storage usage, backup activity or set up cost centers for billing or charge-back purposes.

## Flexible, scalable deployment for growing businesses

EVault InfoStage significantly reduces implementation time and costs by leveraging existing hardware and networking infrastructure. EVault InfoStage can be deployed in a wide variety of cost-effective solutions designed to scale according to business needs. EVault InfoStage accommodates the widest range of environments by protecting data on

more platforms than any other disk-to-disk backup and recovery software provider.

## Support for Tiered Storage

EVault InfoStage supports multiple classes or tiers of disk-based storage through its scheduled, policy-driven migration of backup data. This enables businesses to migrate backup data within the Vault based on the value and relevancy. With Tiered Storage administrators can lower operational and infrastructure costs by automatically moving lower value or long-term backup data to more cost-effective storage.

## Application integration

EVault InfoStage enables backup and recovery of critical data within individual databases, mailboxes or cluster nodes. Plug-ins are available for business-critical applications such as: Exchange, SQL Server, Microsoft Cluster Services, and Oracle.

## Features & Benefits

Feature	Benefit
<b>Automated, disk-to-disk backups</b>	Elimination of tape media management optimizes backup and recovery processes, reducing manual handling and possible errors.
<b>Strong Encryption</b>	Backup data is encrypted in transit and while in storage on the Vault with AES encryption to ensure security of your sensitive data.
<b>Delta Processing</b>	<b>With EVault DeltaPro™</b> only changed data blocks in new or changed files are backed up, resulting in significantly faster backup times and less back-end storage consumption.
<b>Centralized management</b>	Simplify the protection of business-critical data across a network or in remote offices.
<b>Tiered Storage</b>	Reduce administrative complexity and TCO by automatically moving long-term backup data to more cost-effective storage tiers.
<b>Guard Vault configurations</b>	<b>EVault’s Vault Backup Agent</b> enables businesses to protect the vault configuration and online storage against disaster or accidental corruption.
<b>Vault Disaster Recovery</b>	<b>EVault DualVault</b> is a secondary backup Vault that enables businesses to enjoy an additional level of data protection to ensure rapid recovery from disasters or extended outages.
<b>Comprehensive Reporting</b>	Provides backup status, storage levels and environment information of both local and remote environments.
<b>Industry-leading OS Support</b>	Cost-effectively protects multiple platforms and applications, including Windows, NetWare, Linux, Sun Solaris, HP-UX, IBM AIX, and IBM iSeries.

Secure Online Backup & Recovery
