

OVERVIEW

Tiver is a brand new concept, born out of 25 years of data management experience, and is the only company in the UK to offer total offsite data protection (OSDP) and backup solutions. From a single laptop in a car or hotel room through to a company wide enterprise system Tiver offers a completely scalable and flexible offsite storage solution.

Data Storage Solutions

Tiver is the result of years of expert knowledge in the OSDP market with expertise and knowledge drawn from sources as diverse as FTSE 100 companies to Silicon Valley start-ups in California. Its services include:

- + Online Data Storage & Retrieval
- + Business Continuity Planning and Consultancy
- + Offsite Data Protection
- + Disaster Recover Planning
- + Hierarchical and Long Term Storage Systems
- + Managed Storage Services

Business Continuity Planning (BCP)

The new millennium heralded the everyday use of the most exciting technology and IT ever seen, but it's not without risk. From terrorism and global viruses to corporate fraud and employee sabotage, planning your company's continuity has become an essential and often complex pressure on your IT department.

Tiver offers comprehensive, effective BCP consultancy to help you meet just some of these requirements including:

- + Strategic Consultancy, Disaster Recovery Planning and Testing
- + Business Process Driven Software & Benchmarking
- + Internal Data Security Planning
- + Corporate Governance & Legislation
- + ISO Standards & Auditing

Online Data Storage (ODS)

Tiver has researched the rapidly developing global ODS market. Through partnership it has brought together a selection of the leading ODS providers, including InTechnology.

Through this suite of products Tiver can enable you to manage your company's migration from traditional tape based offsite data protection to a fully managed online solution, or a combination of both. Our unique market position means we can offer you true consultancy to evaluate your data storage needs, online or tape, and help you identify and evaluate the total cost of ownership of each solution

"It helps organizations achieve compliance with the Data Protection act (1988) and the Turnbull Report (1999), which required businesses to have reliable data security."

Tivers Products include:

VBAK - A unique managed online data storage, restore & recovery product. VBAK allows scalability from the SOHO-SME bracket, through mid-range and enterprise wide high end data storage requirements. Restore is easily handled from a single file in minutes or the whole data set within hours.

- + From 1 to 200 gigabytes
- + Multi Sites; giving the customer control of offsite data storage of several distributed or 'problem' data sites, e.g. 50 gigabytes plus per site
- + One of the worlds first managed data protection systems; for enterprise wide terabyte environments.

Offsite Data Protection (OSDP)

Tiver is the UK's only company offering the complete spectrum of OSDP services from online data storage to managed offsite tape storage solutions through their sister company Abbot Datastore. Our data vaults ensure that all types of data and Magnetic Media are protected in an environment providing:

- + Offsite physical storage and retrieval of tapes
- + Tape collection and retrieval, library management
- + 24 hour manned and CCTV Security
- + Inergen fire suppression, temperature and humidity control systems

OVERVIEW

"80% of UK companies who suffer a major disaster, and who do not have some form of contingency planning, go into liquidation within 18 months."
